Лабораторная работа №1

Вариант: Написать собственную программу, которая демонстрирует работу с различными системными вызовами (8-15) операционной системы. Произвести диагностику работы написанной программы с помощью утилит ОС, изучив основные принципы применения используемых утилит.

2 Исходный код

```
#include <sys/wait.h>
#include <sys/types.h>
#include <sys/stat.h>
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>
#include <string.h>
#include <fcntl.h> // options flags
#include <inttypes.h>
#include <errno.h>

#define BUFFER_SIZE 256

void rename_file(char * oldfilename, char* newfilename) {
    if (rename(oldfilename, newfilename) == -1) {
        perror("Error while 'rename' \n");
    }
}

int main(void) {
    char* str = "This string was created in this file by system call\n";
    char* oldfilename = "old";
    char buffer[BUFFER_SIZE];
    int fd, w;
    fd = creat(oldfilename, S_IREAD | S_IWRITE);
    if (fd == -1) {
        perror("Error while 'creat' ");
    } else {
        printf("File with filename 'old' was created \n");
    }

    if (w = write(fd, str, strlen(str)) == -1 ) {
        perror("Error while 'write' \n");
    }
    if (fsync(fd) == -1) {
        perror("Error while 'fsync' \n");
    }
    if (close(fd) == -1) {
        perror("Error while 'close'\n");
    }
}
```

```

char newfilename[20];
printf("Enter new filename to rename 'old' \n");
scanf("%s", newfilename);
rename_file(oldfilename, newfilename);
fd = open(newfilename, O_RDWR);
if (read(fd, buffer, strlen(str)) == strlen(str)) {
    fprintf(stdout, "%s", buffer);
} else {
    perror("Error while 'read'\n");
}
if (close(fd) == -1) {
    perror("Error while 'close'\n");
}

```

```

char dirname[20];
printf("Enter a dirname to create new folder \n");
scanf("%s", dirname);

```

```

if (mkdir(dirname, 0755) == -1) {
    perror("Error while 'mkdir' \n");
}

```

```

if (unlink(newfilename) == -1) {
    perror("Error while unlink\n");
}

```

```

    pid_t pid = fork();
if (pid == 0) {
    fprintf(stdout, "It's child process, pid = ");
    fprintf(stdout, "%ld\n", (intmax_t)getpid());
    fprintf(stdout, "Parent's pid = ");
    fprintf(stdout, "%ld\n", (intmax_t)getppid());
} else if (pid > 0) {
    fprintf(stdout, "It's parent process, pid = ");
    fprintf(stdout, "%ld\n", (intmax_t)getpid());
    fprintf(stdout, "Parent's pid = ");
    fprintf(stdout, "%ld\n", (intmax_t)getppid());
    wait(NULL);
} else if (pid == -1) {
    perror("Error fork");
}
return 0;

```

```

}

```

3 Консоль

Вызовы:

```
timxag@KEKNOTE:~/Документы$ ./o1
File with filename 'old' was created
Enter new filename to rename 'old'
old
This string was created in this file by system call
Enter a dirname to create new folder
testdi1
It's parent process, pid = 10919
Parent's pid = 8384
It's child process, pid = 10923
Parent's pid = 10919
timxag@KEKNOTE:~/Документы$ ls
1.c  4   lab1.c lab2.o lab6  o2  testdi1  Отчет2.pdf
1.cpp a.out lab1.o lab3.c labs old  o3  testdir  Отчет3.odt
1.o  kp  lab2  lab4  logpro old testdir1  Отчет3.pdf
2   lab1 lab2.c lab5  o1   test  Отчет2.odt
timxag@KEKNOTE:~/Документы$
```

Диагностика:

```

4 Вывод

Изучение системных вызовов позволило по-настоящему понять, что делает операционная система в момент их исполнения. Важно правильно обрабатывать системные вызовы, это поможет избежать ошибок при некорректном исполнении программы и поможет в ее отладке.
